Workshop App — quick guide for Julia

One link, no password. Open the link José sent you and use **"Add to Home Screen"** — from then on it works like an app. Everything is in English on your side. The link **never expires**; if it ever stops working, just ask José for a new one.

YOUR 5 JOBS — that's all the app asks of you

- 1 New batch arrives → upload your PI quotation (PDF)**
The bell shows "New batch to quote". Open it, tap **Upload your PI pdf — that's all**, and pick your usual proforma invoice. No forms to fill: José's app reads the numbers from your PDF automatically.
- 2 José approves → attach the payment link**
When you see "José approved your quotation", tap **Attach payment link** and paste your deposit link (50%). José pays and uploads the receipt — the 15-workday production clock starts there.
- 3 During production → upload the CAD of each piece**
Open a piece and tap **Upload CAD**. If José requests changes, you'll see his red marks on the image, a note, and sometimes reference photos of how he wants it. Upload the corrected version (v2, v3...) until he approves.
- 4 Finished → upload the FINAL PI + final payment link**
Tap **Upload FINAL PI pdf** with the actual gold weight, balance and shipping, then paste the final payment link. José sees the differences vs the quote automatically.
- 5 Final payment received → ship and add the tracking number**
Tap **Mark shipped + tracking** and paste the tracking. **IMPORTANT:** Etsy orders ship **DIRECT to the customer** — the name and address are inside the order (field "Ship to").

GOOD TO KNOW

- **"What's new"** shows everything that changed since your last visit. A red dot on a batch means it's **your turn**.
- Can't make a piece? Open it and tap **"We can't make this piece"** — it goes back to José, no drama.
- The **"Message José on WhatsApp"** button copies a ready-made message — just paste it in our group and send.
- Tap any photo, CAD or receipt to see it **full screen — pinch to zoom**.
- If José edits an order after sending it, you'll see **"José EDITED an order"** — always check the changes before working.

The cycle at a glance: orders → **your quote (PI pdf)** → approval → **your payment link** → deposit receipt → **your CAD** → approval → production → **your final PI + link** → final receipt → **your tracking**
