Workshop App — quick guide for Julia & Karen

One link, no password. Open the link José sent you and use **"Add to Home Screen"**. Everything is in English on your side. The link **never expires**; if it stops working, ask José for a new one.

YOUR JOBS — that's all the app asks of you

1	New batch arrives → upload your PI quotation (PDF) The bell shows "New batch to quote". Tap Upload your PI pdf — that's all (or just DRAG the file onto the button). No forms: José's app reads the numbers.
2	José approves → attach the payment link Tap Attach payment link and paste your deposit link (50%). José uploads the receipt — the 15-workday production clock starts there. Made a mistake? You can upload a CORRECTED PI until the deposit is paid.
3	During production → the CAD of each piece If a piece shows "CAD provided by José" , work with that file. Otherwise tap Upload CAD (or Skip CAD for repeat designs). When finished, attach the 3 design files — .3DM, .STL and CAD — each in its slot.
4	Ship — in ONE or SEVERAL shipments (split shipments OK) Tap New shipment , pick the pieces going in this box, paste its tracking. Ship the rest later with another tracking — each shipment lists its own pieces. IMPORTANT: Etsy orders ship DIRECT to the customer — the address is inside the order ("Ship to").
5	All shipped → upload the BALANCE invoice + payment link When every piece is on its way, the app asks for the balance invoice (actual gold weight + shipping) and your payment link. José sees the differences vs the quote automatically and pays the balance.

GOOD TO KNOW

- **"What's new"** shows everything since your last visit — a red dot means it's **your turn**. Check **Settings → What's new in the app** for new features.
- Tap ■ on a batch or a piece to set **your refs** — batch (41P) and item # (JTR...). You can also **merge two batches** into one (before the deposit) and upload one UNIFIED PI.
- Can't make a piece? Tap **"We can't make this piece"** — it goes back to José.
- Drag & drop works on EVERY upload button. Tap any photo or CAD to zoom. Your phone's BACK button works inside the app.
- Have an idea? **Settings → Suggest an improvement** — José reads every one and you'll see it marked ■ when it ships.

The cycle: orders → **your PI** → approval → **payment link** → deposit → **CAD + 3 design files** → production → **shipments (1..n, each with tracking)** → **balance invoice + link** → final payment
